

Mitul Gajjar

Senior UI/UX Designer • 8+ Years Experience • AI-Augmented Design

 [My Portfolio Link](#)  mitul690@gmail.com  +91 8320146737  Ahmedabad, Gujarat.  [My Linked In](#)

Professional Summary

Seven years in product design across SaaS, fintech, healthcare, cybersecurity, and creator platforms. Started as a UI designer at a small agency, then spent four years at Bacancy leading a team of 40 and shipping 100+ client projects. Currently at Buzzboard as Senior UX/UI Designer — running user research, building the design system from scratch, doing UI audits on the live product, and working as the solo product designer on Zylo. I use Figma AI, Claude AI, ChatGPT, and Emergent AI as part of my daily process. Not as a talking point — they're just faster for ideation and content flows.

Key Skills

UI Design	Figma Adobe Suite Framer Blender Micro Animations After Effects
UX Practice	User Research Usability Testing UI Audits Wireframing Prototyping Design Systems
Interaction	User Flows Mobile-first Design Interaction Design Journey Mapping Information Architecture
AI Tools	Claude AI ChatGPT Figma AI Figma Make Emergent MidJourney
Leadership	Team Management (40+) Cross-functional Collaboration Dev Handoff Stakeholder Presentations
Accessibility	WCAG 2.1 Accessible Design Inclusive UX Responsive Design

Professional Experience

Senior UX/UI Designer | Buzzboard

November 2024 | Present | Hyderabad

- Run user research end-to-end - recruit participants, moderate sessions, write synthesis reports, and sit in the room when product decisions get made so the findings don't just sit in a doc.
- Audit the live product screen by screen each sprint. Log every inconsistency, friction point, and broken pattern, then work with engineering to clear the backlog - we've resolved 60+ UI issues since I joined.
- Built the design system from nothing. No shared components existed when I started. I set up the token structure, component library, and usage documentation the team now uses daily across web and mobile.
- Use AI tools in real workflows: Figma AI and Figma Make for rapid component generation, Claude for logic and copy reviews, Emergent AI for content flow prototyping. Cuts ideation-to-draft time by roughly 40%.
- Lead all design on Zylo - an AI marketing platform for small businesses. Solo designer on the product covering social post and image generation, Google Business Profile management, Meta and Google Ads, and email campaign flows.

Lead UX/UI Designer | Bacancy Technology

July 2020 - November 2024 | Ahmedabad

- Led a design team of 40 across concurrent client accounts — weekly design reviews, quality sign-offs, mentoring, and hiring decisions. Grew the team from 18 to 40 over two years.
- Shipped 100+ projects across four years. On client flows where we ran UX reviews before dev, conversion rates improved by an average of 20%.
- Overhauled how the team used Figma: shared component libraries, handoff conventions, review checklists. Dev rework dropped 30% within six months of the new system going in.
- Introduced user research and usability testing as a standard part of the process, not an optional extra. Changed how we defended design decisions in client meetings.

Lead UX/UI Designer | Zestbrain PVT LTD

July 2020 - November 2024 | Ahmedabad

- Worked across 20+ UI/UX projects in six months. Client retention went up 10% in that period, mostly because design quality became more predictable.
- Ran a team of six. Every deadline was met, and I made sure nobody was designing blind to the product's business context.

Senior UI/UX Designer | Orange Technolab

May 2019 - Jan 2020 | Ahmedabad

- Redesigned core product screens after going through user feedback. The client reported a 15% improvement in satisfaction scores once the changes went live.
- Stayed involved through dev and QA rather than handing off and disappearing — meant fewer last-minute design fires and cleaner final builds.

UX UI Designer (Internship) | Creart Solutions

Nov 2018 - May 2019 Ahmedabad

- College internship where I moved from web development coursework into design. Worked on real client interfaces under senior designers and came out of it certain that product design was the career, not coding.

Feature Projects

Zylo AI-Powered Marketing Platform | zylo5.com

- Solo designer. AI marketing tool for small businesses with no dedicated marketing team. Designed the full product: social post and image generation, Google Business Profile management, Meta and Google Ads builder, email campaign flows. The brief was to make complex multi-channel marketing feel approachable to someone who's never run a paid ad.

SolvPro Field Service Management SaaS | solvpro.com

- Lead designer. Scheduling calendar, work order management, mobile time tracking, invoicing, and analytics dashboard. Main challenge was information density - field managers check this mid-job on a phone, so every screen had to work at a glance.

FanBasis Creator Economy & Digital Commerce Platform | fanbasis.com

- Lead designer. Checkout funnels, subscription flows, order bumps, and the creator dashboard covering analytics and payment management. Every design decision was filtered through one question: does this reduce friction between someone deciding to buy and actually buying?

CallonDoc Healthcare Telemedicine App | callondoc.com/

- Solo designer. Patient-doctor booking flows, full app UI, and conversion-focused marketing landing page. Designed in Adobe XD. The landing page had a specific CTA target, not just a brand page.

HAND Charity & Donation App UX Case Study | [View](#)

- Full UX case study from research to final UI. Core challenge was building trust in the donation flow people are cautious about unfamiliar causes, so the design focused on transparency around where money goes and how impact is tracked.

Educations

B. Tech Computer Engineer | Sal College of Engineering (GTU) , Ahmedabad. **2019**

Diploma Computer Engineer | L.J Polytechnic | Ahmedabad, India. **2016**

Certifications

Google UX Certification | Coursera Google [View Certificate](#)

40 hours. Covered design thinking, usability testing, journey mapping, visual design, prototyping, and UX writing.

Professional Awards

Customer Hero

A client specifically flagged the RFP Project design as better than what they asked for. Got recognised internally for it.

Beyond & Above 2024

The LINC Project mobile design was called out as the reason the client approved the milestone. Got the award for that.

Team of the Year 2020

The team was short two people during a critical period. Kept both deliveries on schedule anyway.

Project of the Year 2020

Delivered high-quality output that impressed the client and won team recognition.
